ABI Consultants

Worldwide CMMI Services

ABI Consultants

CMMI V2.0 helps organizations quickly understand their current level of capability and performance in the context of their own business objectives and compared to similar organizations.

ABI Consultants provides authorized ISACA CMMI V2.0 appraisals and support services worldwide to meet your business improvement objectives.

Web-based Gap Analysis

ABI services can benefit any size organization. We have experience appraising large multi-national corporations, as well as small independently owned organizations. ABI specializes in first-time baseline appraisals which utilizes a web-based method to collect data about your organization as related to each practice area of CMMI® V2.0.

Our web-based method provides a low cost approach by which to begin your company's process improvement initiative. ABI can customize a web-based collection tool to meet your business needs, providing executive management the data necessary to make informed process improvement decisions.

Evaluation Appraisals

An informal and flexible approach used to help organizations prepare for an appraisal and determine opportunities for improvement.

Benchmark Appraisals

Identify opportunities for organizations to improve how they implement processes and their overall business performance.

Sustainment Appraisal

Appraisal "check-up" that can be done following a Benchmark Appraisal to determine if the organization is maintaining their appraisal level.

Action Plan Reappraisal

A "second-chance" for organizations that narrowly failed to achieve their targeted appraisal level in a previous appraisal.

Worldwide CMMI Services

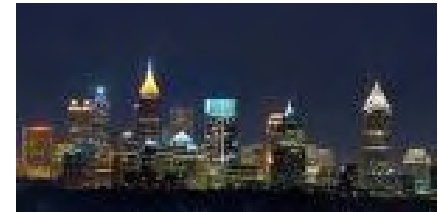

Training

Foundation of Capability.

This course will teach you how to use the CMMI V2.0 Model and the business value that can be gained by improving capability.

Building Development Excellence.

This course will teach you how to build capability in developing or engineering products and services.
